

RASA NUSA STORY

FINAL PROJECT

BY RIFQI RAFIALDY DWIJAYA
PRODUCT MANAGEMENT
BATCH 14

COMPANY CONTEXT

Pikiran Rakyat Media Network is the most established media institution in West Java, with decades of public trust. Like many in the media industry, they are strategically looking to diversify and generate new revenue streams beyond traditional advertising.

PIKIRAN RAKYAT MEDIA NETWORK

The Strategic Context & My Role

The New Venture: The “Experience Economy”

- ☑ One of their key new initiatives is to enter the lucrative “Experience Economy” by creating and owning their own large-scale events.
 - ☑ The “**Rasa Nusa**” cultural food festival was conceived as the **flagship project** for this new business venture.
-

My Role as a PM Intern:

The vision was huge, but the execution plan was not yet defined. My primary challenge was to apply a structured product management framework to transform this high-level business goal into a **viable, de-risked, and successful product launch**.

WHAT I LEARN

My internship quickly taught me that a Product Manager for a new initiative must wear many hats. My first task was to apply the PM frameworks I learned to bring structure to the broad “Rasa Nusa” vision, acting as a strategist, marketer, and project manager.

**Wearing the
“Event
Strategist” Hat**

•

**Wearing the
“Digital Marketer”
Hat**

**Wearing the
“Project
Manager” Hat**

This 360-degree analysis—covering the event program, marketing strategy, and operational plan—was the essential first step that allowed us to move forward with a clear, data-informed, and de-risked strategy.

Research Deep

Dive: Market &

Competitor

Analysis

Competitor / Benchmark	Strengths	Weaknesses / Gaps	Opportunity for Rasa Nusa
Keuken <i>(Local Competitor)</i>	• Strong, "cool" brand identity. • Highly curated tenants. • Very Instagrammable.	• Can feel culturally exclusive. • Focus is more on "style" than deep "story."	To create an event that is equally premium but more inclusive and story-driven .
Ubud Food Festival <i>(Aspirational Benchmark)</i>	• Global reputation. • Deep intellectual programming (masterclasses, talks).	• Very high price point.< • Niche, international audience. • Concept is not directly replicable.	To adopt their program depth (talks, workshops) but make it accessible and locally relevant for a Bandung audience.
Mall Bazaars <i>(Indirect Competitor)</i>	• High, guaranteed foot traffic. • Convenient and weatherproof.	• Zero identity or curation. • Generic, transactional experience. • No emotional connection.	To offer a highly curated and meaningful experience that a mall can never replicate, justifying it as a destination event.

Our Strategic Advantage: Why Pikiran Rakyat?

Identifying the market gap is one thing. Having the right assets to capture it is another. "Rasa Nusa" is not just a good idea; it's the perfect initiative for Pikiran Rakyat's unique strengths.

Our Strength	Impact on "Rasa Nusa" Success
1. Decades of Trust & Credibility	• Instant Legitimacy: We are not just another event organizer; we are a respected cultural institution. This attracts premium partners, sponsors, and government support from day one.
2. Massive Owned Media Reach	• Launch with a "Big Bang": We can introduce "Rasa Nusa" to our 354k+ social media followers and millions of web readers instantly, at a fraction of a competitor's cost. We own our initial hype machine.
3. Unmatched Storytelling Expertise	• Authentic Core Concept: Our "Lalakon" (story) concept is not a gimmick; it's our DNA. We have the best writers and journalists in West Java to bring the stories behind the food to life in a way no one else can.
4. Deep Community & Government Access	• De-risked Operations: Our established relationships significantly streamline complex processes like securing permits, inviting dignitaries, and collaborating with local communities. We can open doors that others can't.

Market Sizing

Before diving into the product, the first step is to understand the scale of the opportunity. I started by sizing the market for a new cultural food festival in Bandung using the TAM-SAM-SOM framework.

**17 million
people**

TAM

The universe of Gen Z & Millennials in our primary markets (Bandung Raya & Jabodetabek)

**1.7 million
people**

SAM

The segment interested in cultural and culinary events is estimated

12 k

SOM

represents a strategic goal to capture **less than 1%** of this serviceable market for our first major event.

User Research: What Does This Market Actually Want?

Methodology:

- Quantitative: I designed and launched a pilot survey, gathering 85 high-quality responses from our target demographic. (On Going)
- Qualitative: I proactively reached out to industry experts and received a positive initial response from Joongla Kitchen, validating the project's relevance among key players.

Key Finding 1: The Core Frustration	Key Finding 2: The Turning Point
Users are tired of uncomfortable event experiences. Their top three frustrations are: overcrowding (75%) , long queues (64%) , and lack of seating (58%) .	85% of respondents agree that an official website is important or very important for an event's credibility. This highlighted a critical user need: a single source of truth to build trust.

From Insights to Solution: A Data-Driven Approach

Our solution wasn't based on assumptions. Every key component of our strategy was designed to directly address the problems and needs we discovered in our research.

Key Insight from Data	Our Corresponding Solution
1. FRUSTRATION with overcrowding & long queues.	We will implement a Free Registration System via the microsite. This allows us to manage crowd expectations and create a "Fast Lane" for registered users, directly solving the queue problem.
2. DESIRE for deeper, meaningful experiences.	We will use a "Freemium" Model . The core festival is free to ensure inclusivity, but we will offer Paid Premium Experiences (workshops, special dining) for our most engaged users.
3. NEED for a credible "single source of truth."	Therefore, the Microsite is the core of our solution. It's not just a marketing tool; it's our "Digital Venue"—the central hub that builds trust, tells our 'Lalakon' story, and facilitates all user actions.

<https://tundra-sound-c1e.notion.site/PRD-Rasa-Nusa-Microsite-2684a003320780e2a450c56142ed3c81>

The PRD: Defining the Value

The PRD clearly defines the value this microsite delivers to both our users and the business, directly linking every decision back to our research findings and strategic goals.

01

User Value (*Solving Their Problem*)

- 1. Clarity & Trust:** Provides a single source of truth, solving the user's #1 frustration of fragmented information and building credibility (validated by **85% of users**)
- 2. Seamless Experience:** Offers a smooth, low-friction registration flow and a "Fast Lane" at the event, directly addressing the pain point of long queues (**64% user frustration**).
- 3. Deeper Engagement:** Acts as a home for the "Lalakon" stories, fulfilling the user's desire for more meaningful experiences beyond just a transactional bazaar.

02

Business Value (*Achieving Our Goals*)

- 1. Community Building (Data Asset):** The microsite is our primary tool for capturing a first-party database of engaged culinary enthusiasts—a core asset for future revenue.
- 2. Monetization Engine:** It enables our "Freemium" model by providing a direct channel to upsell premium, revenue-generating experiences (workshops, dining).
- 3. Brand Building:** Establishes "Rasa Nusa" as a professional, premium, and well-organized event brand from day one, differentiating us from competitors.

Feature Prioritization using MoSCoW Framework

Must-Have (MVP Scope)	Should-Have (Post-MVP, Pre-Event)	Could-Have (If Time Permits)	Won't-Have (Explicitly Excluded)
These features are non-negotiable for the MVP launch on Sep 30. Without them, the product fails to achieve its primary business and user goals.	These features are critical for a complete user planning experience. They will be developed and launched in sprints following the MVP, closer to the event date.	These are "nice-to-have" features that would enhance the experience but are not essential for the first event's success. They are candidates for future iterations.	These features were explicitly excluded from the scope of this project because they offer low strategic value for a high cost/risk, and would distract from our core MVP.
1. Homepage with "Lalakon" Previews: To communicate our unique value proposition.	1. Full Event Schedule/Rundown: To allow attendees to plan their visit in detail.	• Photo & Video Gallery: Good for post-event engagement.	• Native Mobile App: Our research showed a microsite is sufficient.
2. "About Us" Page: To build trust and brand credibility.	2. Full Tenant Directory: To showcase the complete culinary lineup and build hype.	• Interactive "Build Your Schedule" Tool: A complex feature that can be considered for year two.	• Internal Registration & Payment System: Our core "buy" decision. Too high risk and cost.
3. Paid Workshop Detail Pages: Our primary monetization feature.	3. Interactive Venue Map: To solve the user frustration of navigation.	• Full Blog Section: "Lalakon" previews on the homepage are sufficient for the MVP.	• User Login / Profile System: Creates unnecessary friction for users.
4. Seamless Integration to Third-Party Ticketing: Our core technical decision to de-risk the project.	4. FAQ Page: To reduce the operational load on our social media team.		• Live Chat Support: High operational overhead for a temporary event.
5. Mobile-Responsive Design: To serve the majority of our users accessing from social media.			

Who Are We Building For? – User Persona

	Anya, The Cultural Explorer
Demographics	• Age: 22 • Occupation: DKV Student & Freelance Content Creator • Location: Bandung
Bio	A native to TikTok and Instagram, Anya is growing tired of endless hype cycles. She seeks experiences that are authentic, have a story, and connect her to her local Sundanese culture. She follows local artisans and indie musicians, not just mainstream celebrities, and values substance over fleeting trends.
Goals	• To find events that offer more than just aesthetics—she wants substance and stories. • To create content that reflects her values of authenticity and local culture. • To connect with the people behind the craft—the chefs, the artists, the storytellers.
Frustrations	• Soulless, transactional events that feel like generic bazaars. • Hype without substance; events that look good on Instagram but feel empty in real life. • Fragmented and untrustworthy information scattered across social media, making it hard to know if an event is genuinely good.

Feature (from MoSCoW)	User Story for "Anya"
1. Homepage with Lalakon Content	As Anya, I want to immediately see the unique stories behind the tenants on the homepage, so that I can quickly validate that this festival offers the depth and authenticity I'm looking for.
2. About Us Page	As Anya, I want to read the mission and vision behind the festival, so that I can trust the organizers and feel good about supporting their cause.
3. Seamless Handoff to Ticketing Partner	As Anya, when I click 'Register', I want to be taken to a trusted and familiar platform, so that I feel secure and the process doesn't feel sketchy.
4. Paid Workshop Information	As Anya, I want to see clear details about the paid workshops, so that I can evaluate if the experience is meaningful enough for me to invest my money in.
5. Mobile-Responsive Design	As Anya, I want the website to look and work perfectly on my phone, so that I can access information easily, reflecting the professionalism of the event itself.

Try Pitch

Aspect	Build In-House	Use Third-Party (Our Recommendation)
Cost & Resources	High Upfront Cost (CAPEX). Requires weeks of expensive developer hours, cloud setup, and API integration fees.	Cost-Effective. Low to no upfront cost. We pay a small, predictable variable fee per transaction (OPEX).
Time-to-Market	Slow. Minimum 4-6 weeks of development & testing, risking our launch timeline.	Extremely Fast. We can be live and accepting registrations in a matter of days.
Risk	Extremely High. We are responsible for server crashes, payment security, fraud, and data breaches.	Very Low. We leverage their battle-tested, secure, and highly scalable infrastructure. Risk is transferred to the expert.
User Trust & Conversion	Requires Building Trust. Users may be hesitant to transact on a new, unfamiliar system.	Leverages Existing Trust. Users in Indonesia already know and trust platforms like Loker.com, which will increase our conversion rate.
Try Pitch		

Our Strategic Decision: Why "Buying" is Better than "Building"

To **maximize speed, minimize risk, and leverage existing user trust**, our strategic decision is to use a trusted third-party platform. This allows us to focus our limited resources on our core value proposition—**building the unique “Rasa Nusa” experience on our microsite.**

Analysis: This is a Software Project, Not Just a Website.

This ERD proves that building this in-house requires far more than a simple website. It demands:

- **Significant Infrastructure Costs:** We would need to build, manage, and pay for a secure and scalable cloud database infrastructure.
 - **Complex Business Logic:** We would be responsible for building all the logic for payments, promos, and ticketing, where a single bug could mean direct financial loss.
 - **Major Security & Compliance Burden:** We would be fully responsible for securing user data, including hashing passwords and protecting payment information. A data breach would carry massive legal and reputational risk for the Pikiran Rakyat brand.
- In short: This path forces us to become a mini fintech company, which is not our core business.

Our Data Model (When Using a Third-Party):

- **Entities We Own:** Users, Workshops, Workshop_Bookings.
- **Data Source:** This is a simple database populated by **exporting the final attendee list** from our ticketing partner.

Analysis: The Strategic Benefit of "Buying" vs. "Building"

This simple ERD proves that by outsourcing the transactional complexity, our internal responsibilities are minimal, focused, and low-risk.

- **Zero Transactional Infrastructure:** All complex database, payment, and security infrastructure is handled by our partner. We have **no recurring cloud costs** for a payment engine.
- **Minimal Development Effort:** Our developers are freed from building complex payment logic. Their focus shifts entirely to our core value: **building a beautiful, engaging microsite** that tells the "Lalakon" story.
- **Risk is Transferred:** All security, fraud, and compliance risks (like password hashing and payment protection) are **transferred to the expert partner**. This is the most effective way to **protect the Pikiran Rakyat brand** and our users.

In short: We focus on the "Etalase," they handle the "Mesin Kasir."

Metric	Target	Why This Number Makes Sense (Justification)
1. Conversion Rate (Free Registration)	> 15%	This is our North Star Metric. Based on our marketing funnel projection, we need to convert at least 15% of our ~150,000 unique site visitors to reach our goal of 22,500+ registrants. This rate is ambitious but achievable for a free event with a low-friction process, aligning with industry benchmarks (15-25%).
2. Upsell Conversion Rate	> 5%	This validates our "Freemium" business model. A 5% conversion rate from free registrants to paying customers is a healthy industry standard for freemium products. With 20,000+ registrants, this target translates to 1,000+ paid workshop tickets, generating significant revenue and proving the model's viability.
3. Usability Test Success Rate	> 90%	This measures product quality and de-risks the launch. A 90% success rate (meaning 9 out of 10 users can complete a core task without help) is an industry standard for a product to be considered "usable". This is a leading indicator that our design will not be a barrier to achieving our conversion goals.

SUCCESS METRICS

Metric	Formula	Nominator (Apa yang diukur)	Denominator (Pembanding)
1. Conversion Rate (Free Registration)	$(\text{Successful Registrations} / \text{Unique Visitors}) \times 100$	Uniqe Free Registered Attendee	Uniqe Visitor Rasa Nusa Microsite
2. Upsell Conversion Rate	$(\text{Paid Tickets Sold} / \text{Free Registrants}) \times 100$	Premium Ticket Sold	Free Registration Attendee
3. Usability Test Success Rate	$(\text{Successful Tasks} / \text{Total Tasks Attempted}) \times 100$	Participant with Succesfull Task	Total Participant who participate

SUCCESS METRICS

1. Our Microsite (The "Etalase"):

- Our microsite is not just a static page. It will be built with a **modern architecture** and hosted on a high-performance platform like **Vercel** or **Netlify**. This ensures it's fast and highly customizable.

2. Universal Analytics (The "Brain"):

- We will implement **Google Analytics 4 (GA4)** across our microsite. GA4 is specifically designed to track user journeys across different platforms. We can set up **conversion goals** (like a button click to the ticketing site) to track user intent.

3. Data Passthrough & Export (The "Bridge"):

- This is the key. When a user successfully registers on our partner's site (e.g., Locket.com), the partner will **redirect them back to a custom "Thank You" page on our microsite**.
- This redirect will pass key information (like a transaction ID) in the URL, which is then captured by our Google Analytics. This is how GA4 knows a conversion was successful. We also get a full **data export** of all registrants from our partner.

4. The Unified Dashboard (The "View"):

- Finally, we will use a tool like **Looker Studio** to combine the data from our **Google Analytics** (which tells us about user behavior *on our site*) with the **exported data from our ticketing partner** (which gives us the final, confirmed numbers).
- This creates a **single, unified dashboard** where we can see the entire funnel—from the first ad click to the final registration—allowing us to track our KPIs in real-time.

Success Metrics: The 'How' (Our Measurement Stack)

A common question is: "If transactions happen on a third-party site, how do we own our data and measure success?"

The answer lies in a **modern measurement stack** that gives us a complete view of the user journey, even across different domains.

The answer lies in a **modern measurement stack** that gives us a complete view of the user journey, even across different domains.

Roadmap

Now that the initial strategic planning is complete, here is our proposed, forward-looking development roadmap. We will work in two-week Agile sprints within this timeline to ensure continuous progress and adaptability.

September 15 - 25
Planning and Design

Goal: Finalize the blueprint and assemble the team.

- Finalize PRD.
- Recruit & onboard external developer.
- Create & validate UI/UX mockups through usability testing.

September 26 - October 10
Development & QA

Goal: Build a stable and functional MVP.

- Develop all "Must-Have" features.
- Integrate with the selected third-party ticketing platform.
- Conduct internal QA and bug fixing.

October 13
Launch MVP

Go-Live!

- The microsite is live and ready to accept registrations.
- Begin tracking key metrics on our analytics dashboard.

Post October 13
Iteration and Expansion

Goal: Enhance the product based on user data and feedback.

- Develop and deploy "Should-Have" features (e.g., Full Schedule, Tenant Directory) in subsequent sprints, running in parallel with the main marketing campaign.

Open Question	Why It's Important	Next Step
Which specific third-party ticketing platform will be our official partner?	This decision directly impacts our final budget (transaction fees), user flow, and the technical integration required by our developer.	Finalize comparison between Locket.com and two other providers and get a decision from management by the end of this week.
What is the content pipeline for the "Lalakon" stories?	The success of our homepage depends on high-quality content. We need a clear workflow and timeline for story production from the editorial team.	Schedule a sync meeting with the Head of Content to define the content delivery schedule for the first four stories.
What is the technical method for data passthrough?	To accurately measure our North Star Metric (Conversion Rate), we need to ensure the data from a successful registration on the partner site is passed back to our Google Analytics.	Our developer's first task will be to consult with the chosen ticketing partner's technical team to confirm the best implementation method.

THANK YOU
